Acute Respiratory Infection (ARI) Situation in Singapore 2025

ARI indicators for E-week 27 (29 Jun 2024 - 5 Jul 2025) were as follows:

The average daily number of patients seeking treatment in the polyclinics for ARI was 2147 (over 5.5 working days) in E-week 27.

In E-week 27, the top respiratory pathogens among adult and paediatric samples from the National Surveillance Programme for Acute Respiratory Infection[§] (ARI) were:

- Adult samples: SARS-CoV-2 (18%) Human rhinovirus/enterovirus (16%), and Influenza (8%).
- Paediatric samples: Human rhinovirus/enterovirus (22%), Respiratory Syncytial Virus (14%), and Influenza (12%).

[§] CDA monitors the trends of respiratory pathogens in the community through our sentinel surveillance programme for Acute Respiratory Infections (ARI) which includes polyclinics and selected general practitioner (GP) clinics.

COVID-19 and Influenza

The proportion of patients with influenza-like illness (ILI) among the polyclinic attendances for ARI was 0.4%. The positivity rate for influenza among ILI samples (n= 135) in the community was 16% in E-week 27. The positivity rate for COVID-19 among ARI samples (n= 292) in the community was 16% in E-week 27.

Of the 82 specimens tested positive for influenza in June 2025, 27 were positive for Influenza A(pH1N1) (33%), 45 were positive for Influenza A(H3N2) (55%), and 10 were positive for Influenza B (12%).
